FAIRsFAIR on Cordis - Open call for data repositories

FAIRsFAIR announced the intention to support data repositories with two different initiatives:

1) Support for data repositories towards achieving CoreTrustSeal certification (www.coretrustseal.org): FAIRsFAIR is offering financial incentive of up to €10.000 per data repository as well as dedicated support for pre-submission to the CoreTrustSeal certification process;

2) Support for the "FAIRification" of your repositories by discussing and designing implementation features that enable and increase repository interoperability. This will be achieved through building and testing prototypes of an interoperability layer for data repositories, and will ultimately improve the FAIRness of data in repositories that enable FAIR data.
