

20 January 2020

The main findings from the FairsFair report on **FAIR requirements for persistence and interoperability** will be presented and discussed at a webinar to be held on 11 February.

The report is the first of **three** to be published during the life of the project, and is based on studies of public information, especially EOSC infrastructure efforts, and on limited **surveying** and interviews.

The purpose of the webinar is to gather information to inform further iterations of this preliminary view of commonalities and possible gaps regarding semantic interoperability, and the use of metadata and persistent identifiers across infrastructures.

For more information and to register for the webinar click here.
