Date:
08 December 2020
Location:
Online

Tuesday, 8 December, 14.00-15.00 CET

As a main partner in the FAIRsFAIR project, EUA is organising this webinar to share and discuss:

- FAIRsFAIR policy and service recommendations for research data management at research organisations
- Institutional good practice and the role of FAIR data within Horizon Europe.

Universities and researchers across Europe are increasingly expected to manage research data according to the FAIR principles, most notably through Horizon Europe. Therefore, research data policies, support services, processes and infrastructure at higher education institutions need to be ready for FAIR data. Bottom-up and top-down measures must converge at the institutional level, making this a challenge of strategic relevance that encompasses different levels and stakeholders within a university.

FAIRsFAIR, a European-level project funded through the European Open Science Cloud initiative, is at the forefront of developing recommendations and guidance documents on how to build and sustain research data management policies and services within research performing organisations.

The webinar will be of interest to leadership or management staff in charge of managing or establishing research data management policies and services, research data management professionals, as well as researchers and others with an interest in research data and Open Science.

Presenters

- **Lennart Stoy**, Project Manager, Research & Innovation, European University Association
- **Joy Davidson**, Research Associate, Digital Curation Centre
- **Kristina Hettne**, Digital Scholarship Librarian, Centre for Digital Scholarship, Leiden University
- **Kostas Repanas**, Policy Officer, European Commission
