Date:
11 June 2021
Location:
Virtual

CODATA, in partnership with the DDI Alliance, is organizing a meeting to explore the findings from "The Role of DDI-CDI in EOSC: Possible Uses and Applications," a report for the European Open Science Cloud Co-Creation Project (https://doi.org/10.5281/zenodo.4707263) which was recently published. This report investigated how a standard model like DDI-Cross Domain Integration (DDI-CDI) could be usefully implemented in support of a large-scale cross-domain data-sharing infrastructure, and highlighted several use cases and topics. The meeting will focus on the recommendations from the report, and a discussion of practical next steps.

The meeting is planned for Friday, 11 June 2021 from 15:00 to 17:00 CEST (13:00-15:00 UTC). An overview of the report will be presented, including a brief summary of the use cases and topics from the report, and a presentation of findings. This will be followed by a discussion organized around comments from invited respondents, and then a general discussion of what useful follow-up activities might be considered.

Please register for the workshop at https://attendee.gotowebinar.com/register/1430439754098534924
We are hopeful that this report can lead to focused work on some of the topics it raised, and that this event will help us address some of the issues which discussions around DDI-CDI and the EOSC data-sharing infrastructure have highlighted.
