Fostering Fair Data Practices in Europe

**Implementation stories related to the PID
Graph notebooks**

TAKE THE SURVEY!

**Tell us about your experience with
notebooks and what use cases you would
like to investigate**

23 June 2021

FAIRSF AIR is interested to learn about implementation stories related to the PID Graph. In particular, we would like to follow up the use of Jupyter notebooks that have been developed in the [FREYA project](#) to query the DataCite GraphQL API. The notebooks which are available in [this GitHub repository](#) as well as on [pidnotebooks.org](#) were created to extract information from the PID Graph based on 10 different use cases.

FAIRSF AIR would like to follow up the use of the notebooks and investigate implementation stories related to the PID Graph.

In particular, we would like to gather feedback from the community on how the notebooks have been used and what kinds of use cases researchers would like to investigate. We very much appreciate your input and you can help us by filling out this [short survey](#). The survey will be open until **July 22nd**.
