Location:
On line

Following a series of community workshops and a period of public consultation, FAIRsFAIR published its **Framework for assessing FAIR Services**[1] in August 2021. The framework aims to help service providers assess how FAIR-enabling their current practices are and provides practical guidance on areas where improvements might be made. This webinar will introduce the framework and provide an overview of the seven FAIR-enabling aspects covered. Practical tips on applying the framework will also be provided. Registration is free and open to all however the main audience is repository managers and data service providers. Data stewards and developers may also find the session informative.

Register
