

FAIRsFAIR
Fostering Fair Data Practices in Europe

Supporting data repositories in their FAIR uptake

Josefine Nordling (CSC – IT Center for Science)

2 June 2021

FAIRsFAIR – Finnish Roadshow

What is a FAIR repository?

- A repository matching the *scientific domain* of the research data to be deposited - a “domain” repository that hosts specific types of data. They should have expertise in:
 - *Curating and making the data interoperable* for that discipline
 - *Maintain data quality*
 - Provide a level of *peer review* for the data
 - Help data meet *community standards* to enable interoperability and reusability of the data
 - *FAIR-aligned* repository whenever available
- In addition, they should ideally:
 - Offer DOIs, data landing page, provide transparent data license information, facilitate data discovery, have a fit-for-purpose certification etc.

Scope of data repository support

Focus on the data repository support measures of FAIRsFAIR - both the activities where the project engages directly with repositories, along with the support program being developed. The main goal is to help them in becoming FAIR enabling repositories with FAIR data holdings.

- Supporting repositories in developing their core services and offering advice on good practice when supporting others in producing and making use of FAIR data.
- More specifically, advising how to become a trustworthy repository supporting FAIR data access, means of increasing the interoperability of datasets, and developing skills to support others in FAIR practice.
- Three types of support:
 - Designing & developing features and tools
 - Hands-on support
 - Recommendations & good practices

Repository Support Series webinars

<https://fairsfair.eu/repository-support-webinars>

Past webinars:

- PID graphs, April 21st
- FAIR-enabling Services: Validating The Framework - Have your say, May 20th

Coming webinars & webinar ideas:

- Using registries, July 13th
- Preservation planning
- Using F-UJI to assess FAIRness of data holdings
- Interoperable metadata catalogues
- FAIR assessment framework

Designing & developing features and tools: **Fostering skills development to support FAIR practice**

- FAIR Competence Framework
- For more information: <https://www.fairsfair.eu/events/fair-data-competences-doctoral-education-programmes>

Designing & developing features and tools: **Raising awareness, assessing the FAIRness of data & facilitating the findability of repositories**

- FAIR-Aware: A manual self-assessment tool to educate and raise awareness of researchers on making their data FAIR before depositing the data into the repository. More information: <https://www.fairsfair.eu/f-uji-automated-fair-data-assessment-tool>
- F-UJI tool: A FAIR metrics developed for automated assessments for published. More information: <https://fairaware.dans.knaw.nl/>
- Repository finder: <https://repositoryfinder.datacite.org/>
 - Developed by DataCite for the Enabling FAIR Data project
 - Lists repositories that currently are accepting data to support publication, including those that are certified and support the FAIR principles
 - Extended criteria made by the FAIRsFAIR to *filter out FAIR repositories*. The FsF iteration supports three filtering options: (1) Open access data; (2) Persistent Identifiers; (3) Certified repository

Repository Finder, a pilot project of the [Enabling FAIR Data Project](#) in partnership with DataCite and the Earth, space and environmental appropriate repository to deposit your research data. The tool is a registry of research data repositories.

As part of the [FAIRsFAIR project](#), which aims to supply practical support throughout the research data life cycle, the Repository Finder is a key component of the FAIRsFAIR Project.

Search [re3data](#) for a repository to upload your data

or

See the [repositories](#) in re3data that meet the criteria of the [Enabling FAIR Data Project](#)

See the [repositories](#) in re3data that meet the criteria of the [FAIRsFAIR Project](#)

<https://repositoryfinder.datacite.org/>

- Search [re3data](#) for a repository to upload your data
- See the repositories in re3data that meet the criteria of the [Enabling FAIR Data Project](#)
- See the repositories in re3data that meet the criteria of the [FAIRsFAIR Project](#)

The repository provides open access to its data 

Research data hosted by the repository are accessible without restrictions.

The repository uses persistent identifiers 

Persistent identifiers such as DOIs uniquely identifier datasets, enable the linking to publications, and help with discovery.

The repository is certified 

Certifications make sure repositories follow community standards and best practices

4TU.Centre for Research Data

[4TU.ResearchData](#)

4TU.ResearchData, previously known as 3TU.Datacentrum, is an archive for research data. It offers the knowledge, experience and the tools to share and safely store scientific research data in a standardized, secure and well-documented manner. 4TU.Centre for Research Data provides the research community with: Advice and support on data management; A long-term archive for scientific research data; Support for current research projects; Tools for reusing research data.

Hands-on support: **Facilitating interoperability between repositories**

- Working with 12 repositories on designing implementation features to increase repository interoperability: <https://fairsfair.eu/application-results-open-call-data-repositories>
- Set of FAIR data repositories features: <https://doi.org/10.5281/zenodo.3631528>
- Create the bases for continued work on *sustainable technical implementation* of the FAIR principles on a broad level
- *Improve understanding* of the current variety in *FAIR data standards*
- *Improve the semantic interoperability* of research resources by specifying FAIR metadata schemas, vocabularies, protocols, and ontologies
- *Provide solutions for interoperability requirements and machine-accessibility* for FAIR enabling repositories

Recommendations & good practices: FAIR policies & practices

<https://www.fairsfair.eu/form/open-call-policy-enhancement-support>

FAIR policy & practice – Collaborating partners

Recommendations & good practices: **FAIR Semantics**

- Recommendations for creating FAIR semantic artefacts
- Collaboration with the RDA Vocabulary Service Interest group
- Workshop upcoming 4th of June. Registration: <https://www.fairsfair.eu/events/common-minimum-metadata-semantic-artefact>
- Semantic artefacts as FAIR data objects:
 - Implementing machine-actionability
 - Defining metadata

Recommendations & good practices: **FAIRifying the metadata**

- Providing *examples of good practice* in building community consensus around interoperability frameworks, including e.g. using:
 - *Agreed vocabularies*
 - *Agreed terminologies*
 - *Metadata standards* when describing the research outputs
- Allowing data citation using *PIDs*

Recommendations & good practices: **Supporting materials & channels**

- D3.5 Description of Transition Support Programme for Repositories:

<https://zenodo.org/record/4058340#.YLUGGbQzYUE>

- Short guidance materials
- Contributing resources for the FsF Competence Centre (e.g. FAQs)
- Encouraging community dialogue via FAIR Data Forum (<https://fairdataforum.org/>)
